Variation in the final objective value
Each box summarizes repeated runs from the same starting suggestion
2. Proportional to between−cluster SD
4. Equal c_h allocation
1. Proportional to stratum size
3. Neyman proportional
0.60
0.65
0.70
0.75
0.80
Estimated variance
Feasible
TRUE
Starting suggestion
1. Proportional to stratum size
2. Proportional to between−cluster SD
3. Neyman proportional
4. Equal c_h allocation
